

ECP 1000

Event Control Panel for the SGS 408

FEATURES

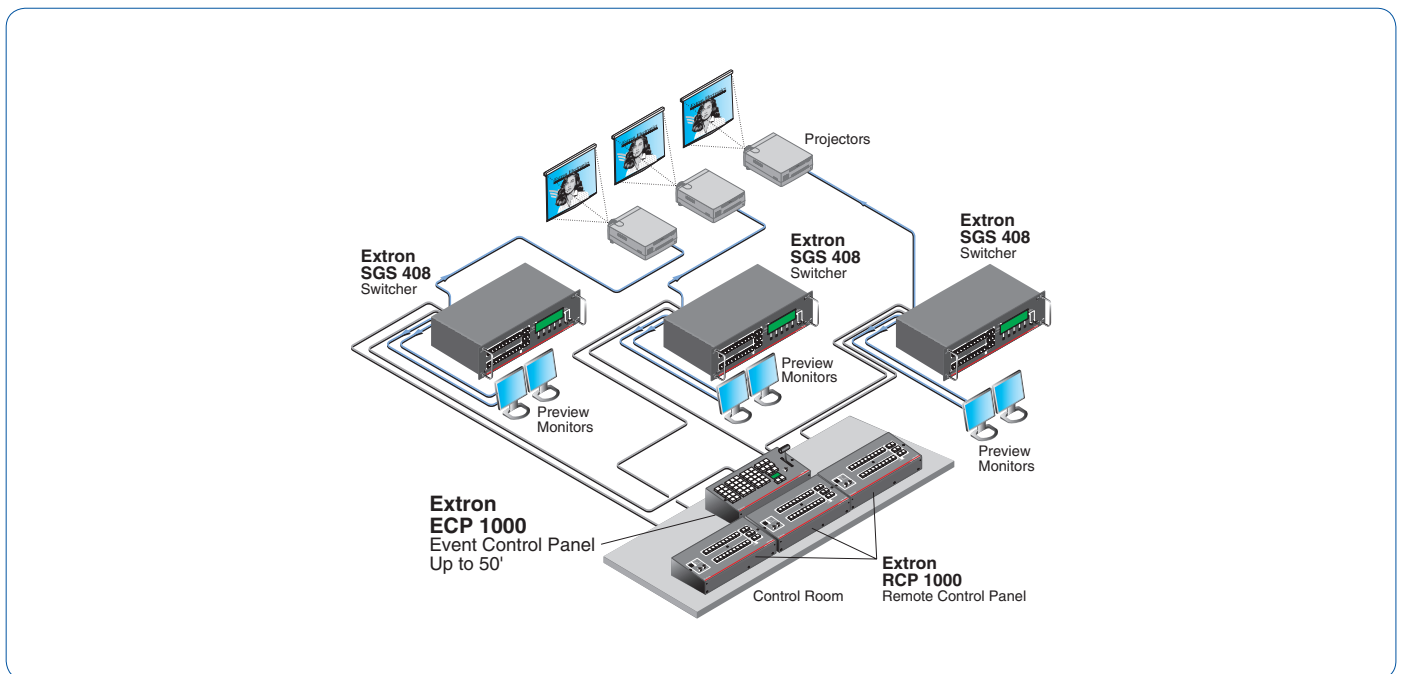

- **Enables complete control over the digital switching effects of up to three SGS 408 Seamless Graphic Switchers**
- **Allows for simultaneous cuts, wipes, and dissolves** — These effects can be timed and synchronized on multiple screens or move sequentially across up to three screens, such as a left-to-right wipe that starts on the first screen and ends on the third.
- **Offers 40 multi-screen transition presets - 30 factory & 10 programmable** — Effect buttons call up multi-screen effects. Provided are 30 factory preprogrammed presets and 10 user-programmable presets. Each button is labeled with a pictorial example of its effect. All buttons may be overwritten with Extron's Windows®-based software. New button labels can be made by any Brother P-Touch™ labeler or by Extron label software, which ships with every Extron matrix switcher.
- **Effect selection buttons include wipe, dissolve, and title**
- **Screen buttons to select which screens the effect will take place on**
- **Adjustable transition effect duration** — Front panel LCD displays duration of effect. Each effect provides a user-adjustable duration ranging up to five seconds.
- **T-bar transition controller for manual control of single and multi-screen events** — The user selects an effect and uses the Extron special manual controller to control the speed of the transition.
- **Windows®-based software allows for the creation of effects combinations** — These combinations can be stored as a preset sequence - preprogrammed presets can be overwritten.
- **May be used with the RCP 1000 to connect to three SGS 408 switchers via three 9-pin D connectors**

DESCRIPTION

The Extron **ECP 1000** Event Control Panel allows for transition effects across multiple screens. The ECP 1000 enables complete control over the digital switching effects of up to three Extron SGS 408 Seamless Graphic Switchers, allowing for simultaneous cuts, dissolves, and wipes that are timed and synchronized on multiple screens. Effects then take place on each screen simultaneously, or move sequentially across the screens in a specific direction, such as a left-to-right wipe starting on the first screen and ending on the third.

The ECP 1000 also offers the special Extron T-Bar Transition Controller for manual control of single and multi-screen events. The ECP 1000 provides 40 multi-screen transition presets, each selectable with a single button push. Of these presets, 30 contain factory preprogrammed switching sequences, and 10 are user-programmable.

The ECP 1000 includes Windows®-based software to allow the user to create any combination of effects and store the sequence as a preset — preprogrammed presets can be overwritten. The ECP 1000 may be used in conjunction with the RCP 1000. Three 9-pin D-sub connectors are provided for connection to three SGS 408s.
